# 3 ANATOMIE D'UN BLOC ACF

## CRÉATION D'UN BLOC TÉMOIGNAGE

### 1. DÉCLARATION DU BLOC

```
// Custom blocks
add_action('acf/init', 'my acf blocks init');
function my_acf_blocks_init() {
    if( function_exists('acf register block') ) {
        // Testimonial block
        acf_register_block(array(
            'name'
                                => 'testimonial',
                                => __('Testimonial', 'my-acf-blocks'),
            'title'
                                => __('A custom testimonial block.', 'my-acf-blocks'),
            'description'
            'category'
                                => 'my-blocks',
                                => 'format-chat',
            'icon'
            'mode'
                                => 'auto',
                                => array( 'align' => array( 'wide', 'full' ), 'mode' => false),
            'supports'
                                => array( 'testimonial', 'témoignage' ),
            'keywords'
                               => get_stylesheet_directory() . '/blocks/testimonial/testimonial.php',
            'render_template'
                                => get_stylesheet_directory_uri() . '/blocks/testimonial/testimonial.css',
            'enqueue_style'
        ));
```

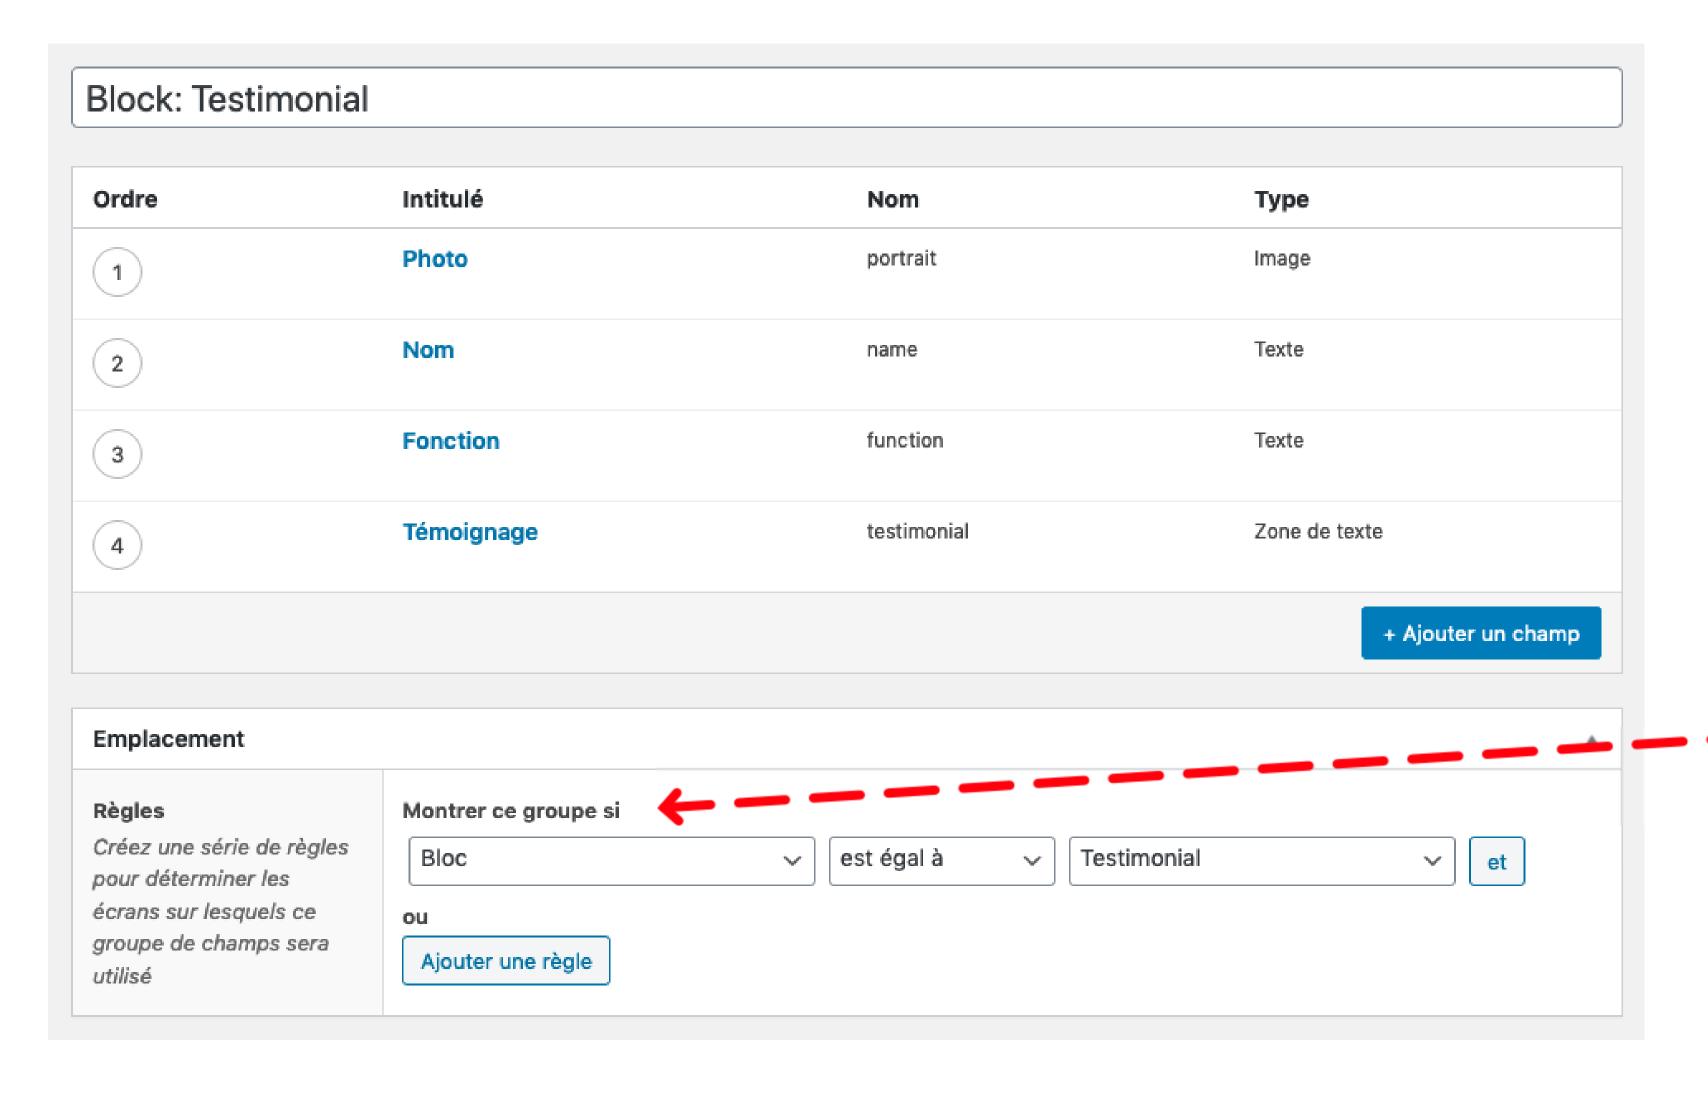

En option on peut déclarer un groupe de blocs.

### 1. PARAMÈTRES DU BLOC

- name
- title
- description
- category [common|formatting|layout|widgets|embed]
- iCON [ dashicon | svg ]
- keywords
- post\_types
- mode [ auto | preview | edit ]
- align [left|center|right|wide|full]
- **SUPPORT** [align|mode|multiple]

- render\_template
- render\_callback
- enqueue\_style
- enqueue\_script
- enqueue\_assets

### 2. CRÉATION DES CHAMPS PERSONNALISÉS

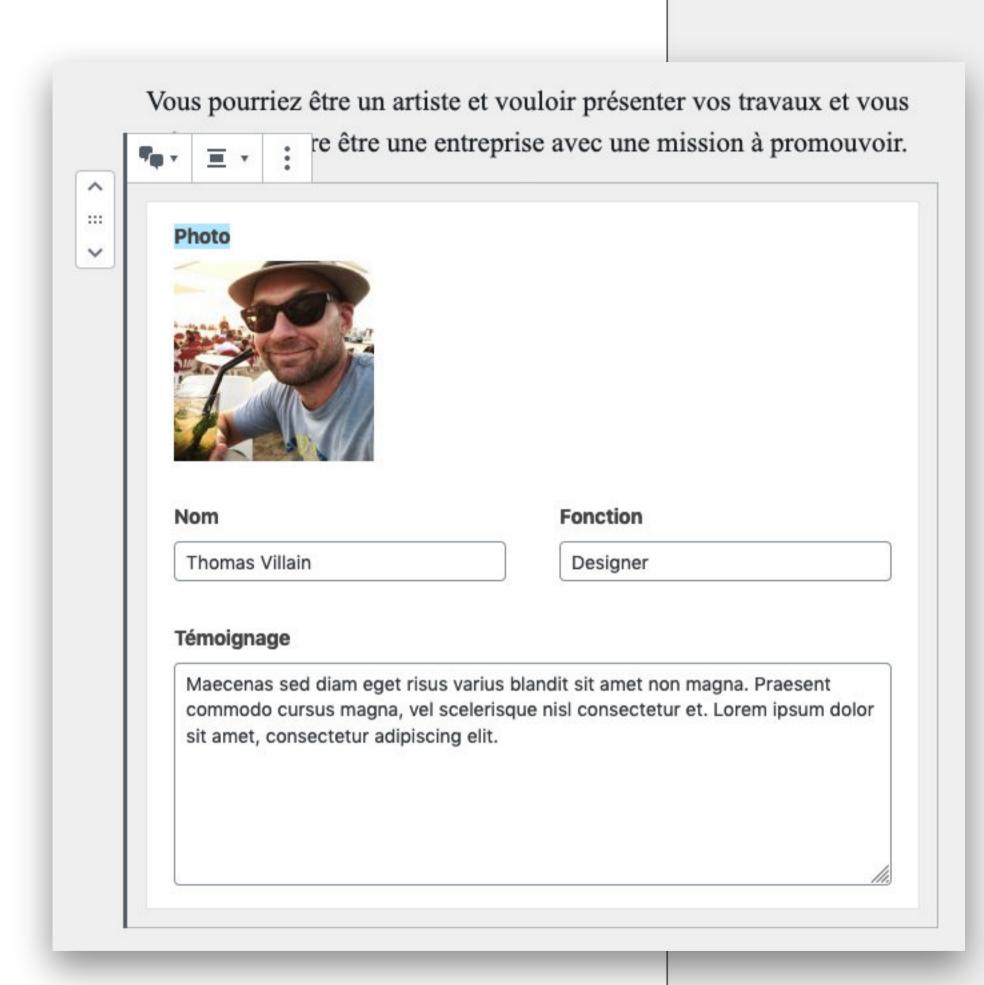

!important

### 3. CRÉATION DU TEMPLATE

```
<?php if ( !defined('ABSPATH') ) die();</pre>
   // Gutenberg stuff
   $id = $block['id'];
   if( !empty($block['align']) ) {
       $align = ' align' . $block['align'];
   } else {
       $align = null;
   // ACF stuff
   $author = get_field( 'name' );
   $desc = get_field( 'function' );
   $picture = get_field( 'portrait' );
   $text = get_field( 'testimonial' );
                   <section class="acf-block--testimonial<?php echo esc_attr($align); ?>" id="<?php echo esc_attr($id); ?>">
                       <div class="acf-block-container">
                           <article class="acf-block-testimonial-item">
                               <div class="acf-block-testimonial-figure">
                                   <?php
                                       if ( $picture ) {
                                           echo '<img src="'.$picture['sizes']['thumbnail'].'" alt="'.$picture['alt'].'">';
                                       } else {
                                           echo '<img src="' . get_stylesheet_directory_uri() .'/assets/fallback.png" alt="">';
                                   } ?>
                               <div class="acf-block-testimonial-content">
```

### 4. CRÉATION DU CSS

```
Testimonial Block
.acf-block-testimonial-figure img {
    border-radius: 50%;
.testimonial-desc {
    display: block;
    font-style: italic;
 media (min-width: 782px) {
    .acf-block-testimonial-item {
       display: flex;
        flex-wrap: wrap;
    .acf-block-testimonial-figure {
       width: 30%;
    .acf-block-testimonial-content {
       width: 70%;
        padding-left: 2rem;
```
